EMERGING ISSUE CYCLE

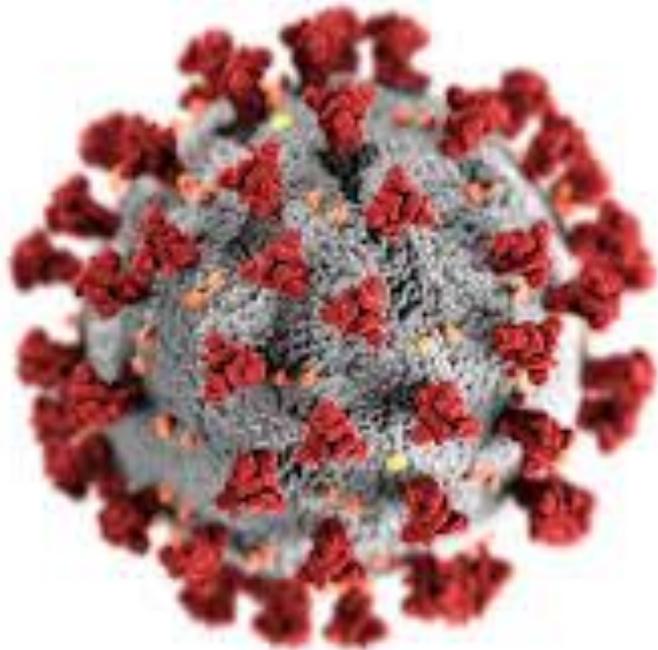

This cycle is going faster and faster due to modern communication (Facebook, Twitter,....)

STAKEHOLDERS PUSH THE PENDULUM

After a few cycles, the pendulum will be quite 'neutral'

CORONA LEARNED US A LOT ABOUT BALANCE AND ABOUT THE NEED TO BE PRO-ACTIVE

Only 'minor' discussion on the balance between health and economy.....in EU

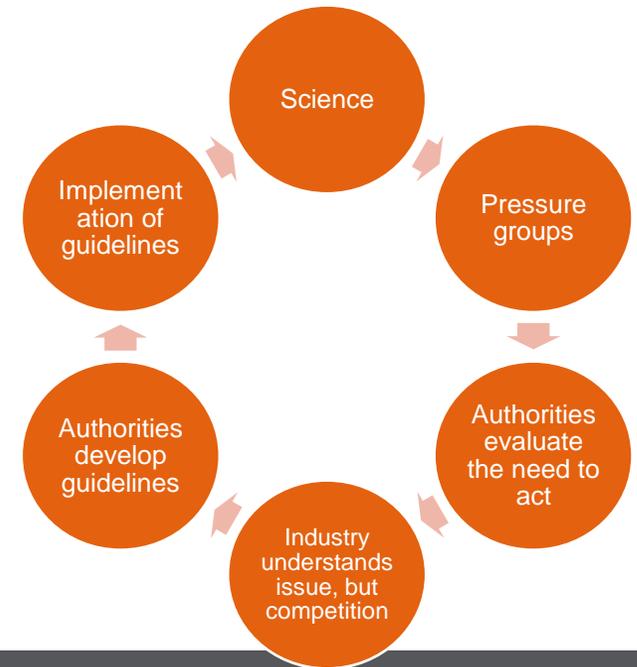

IMPLEMENTED ON EMERGING ISSUES

Is this damaging economy ?

- Avoid 'lockdown'
- Gives opportunities to new developments (eg new products)

And....reduced impact on health, more healthy people means more resources to contribute to economy (production, consumption)

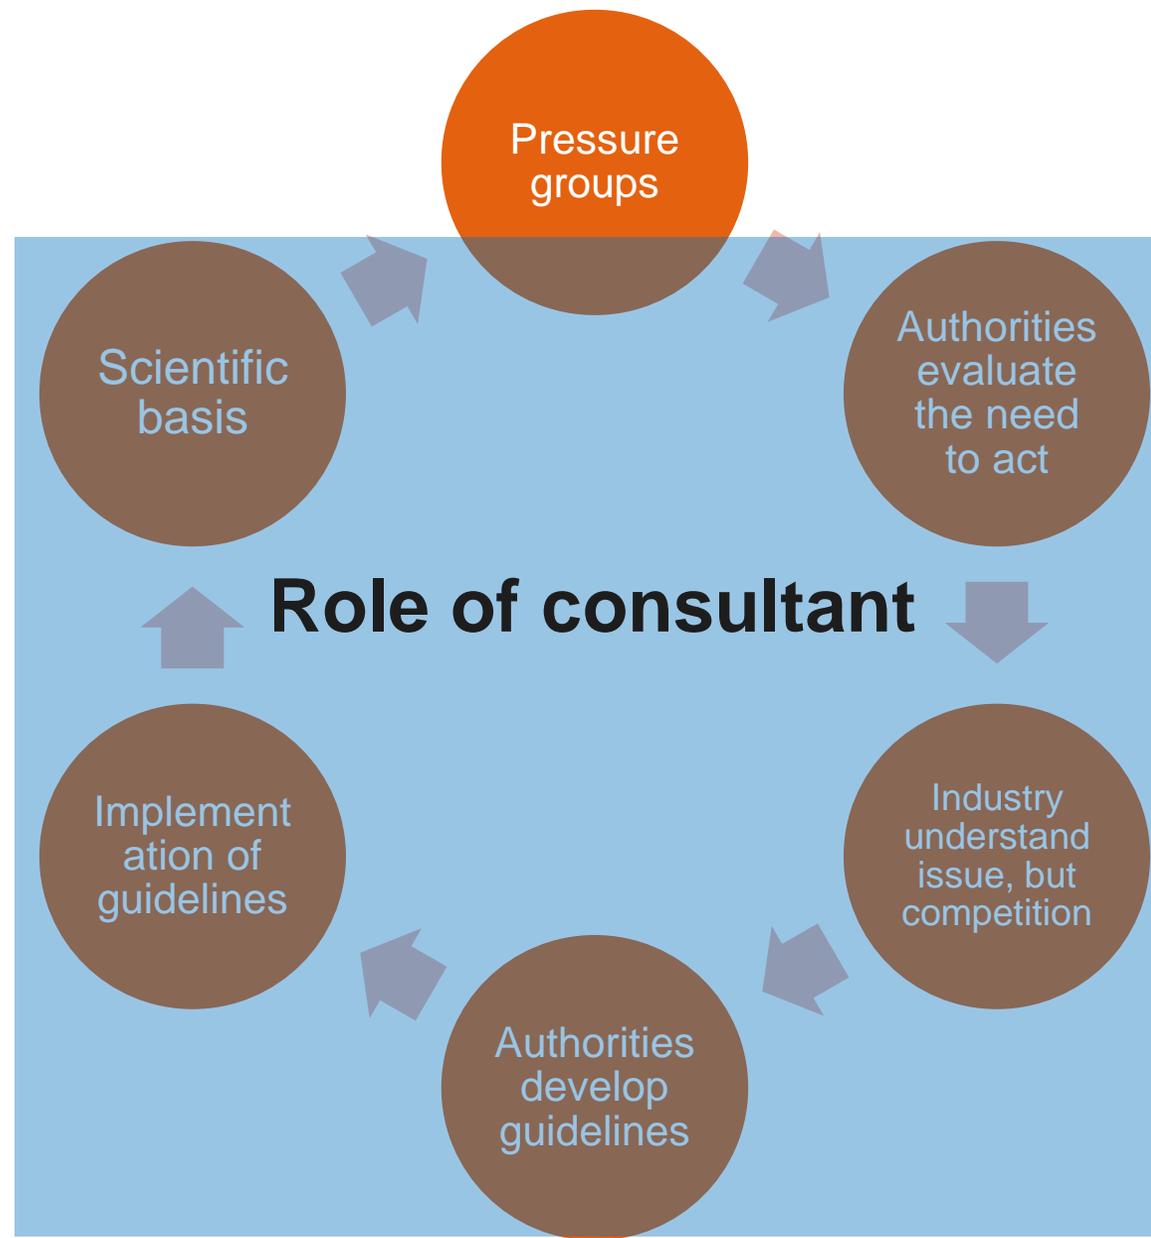

Manage the cycle, and therefore there is the need to monitor the steps : eg biomonitoring in Flanders is good idea

This issue can be solved as well

Role of consultant

- Development of technology together with scientific world
- Implementation of technology
- Implementation of guidelines
- Input/support in guidelines
- Mediator between problem holders and regulator
-

Consultant is engine of the cycle. (S)he is therefore as well obliged to take the role of mediator.
